

**AMENDMENTS TO THE CLAIMS**

Please amend the claims so that they read as follows:

1. (Currently Amended) A method for synthesizing pentostatin, a pentostatin analog, [[a]] pentostatin aglycone, or a pentostatin aglycone analog which method comprises the steps of:

converting a dialkyl tartarate to a succinonitrile derivative having the formula:

wherein Z is OR<sub>15</sub>, wherein R<sub>15</sub> is a protecting group;

reacting the succinonitrile derivative with an amine iminoether selected from:

(a) an iminoether having the formula

wherein R is H or

wherein X is O, S, NH, or CH<sub>2</sub>, or

(b) an iminoether having the formula

wherein R<sub>16</sub> is

wherein R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, R<sub>4</sub>, R<sub>5</sub>, and R<sub>6</sub> are independently selected from OH, H, methyl, alkyl, CH<sub>2</sub>OH, a halogen, a substituted or unsubstituted O-R' group, a substituted or unsubstituted S-R' group, or a NR'R'' group, wherein R' and R'' are independently a straight-chained or substituted alkyl or alkenyl group; or

(c) an iminoether having the formula

wherein R<sub>17</sub> is

wherein R<sub>7</sub>, R<sub>8</sub>, R<sub>9</sub>, R<sub>10</sub>, R<sub>11</sub>, R<sub>12</sub>, R<sub>13</sub>, and R<sub>14</sub> are independently selected from OH, H, methyl, alkyl, CH<sub>2</sub>OH, a halogen, a substituted or unsubstituted O-R''' group, a substituted or unsubstituted S-R''' group, or a NR'''R'''' group, wherein R''' or R'''' are independently is a straight-chained or substituted alkyl or alkenyl group;

to form a ~~substituted~~ imidazole-containing compound, wherein the ~~substituted~~ imidazole-containing compound comprises a moiety having a cyano group;

reducing the cyano group on the ~~substituted~~ imidazole-containing compound to a primary amino group; and

cyclizing the primary amino group with a second amino group on the ~~substituted~~ imidazole-containing compound to obtain pentostatin, ~~a pentostatin analog, a pentostatin aglycone, or a pentostatin aglycone analog~~ a pentostatin analog selected from:

(a) a pentostatin analog in which the oxygen atom in the sugar moiety is replaced with a sulfur atom, a NH group, or a CH<sub>2</sub> group;

(b) a pentostatin analog in which the sugar moiety is based on arabinose, xylose, ribose, lyxose, glucose, galactose, manose, gulose, idose, talose, altrose, allose, fructose, sorbose or tagatose instead of deoxyribose,

or a pentostatin aglycone analog in which the carbon atom between the two nitrogen atoms on the seven-member ring is altered.

2. (Original) The method of claim 1, wherein the dialkyl tartarate is in either the L or D enantiomeric form.
3. (Original) The method of claim 2, wherein the dialkyl tartarate is L-Diethyl tartarate.
4. (Original) The method of claim 2, wherein the dialkyl tartarate is D-Diethyl tartarate.
5. (Canceled)
6. (Currently Amended) The method of ~~claim 5~~ claim 22, wherein the primary amine has the formula R<sub>21</sub>-NH<sub>2</sub>, wherein R<sub>21</sub> is a ~~Hydrogen~~, a substituted or unsubstituted alkyl group, a substituted or unsubstituted alkenyl group, a substituted or unsubstituted aryl group, a substituted or

unsubstituted aralkyl group, a substituted or unsubstituted cycloalkyl group, a substituted or unsubstituted alkoxyalkyl group, or a substituted or unsubstituted heteroaryl group.

7. (Original) The method of ~~claim 5~~ claim 6, wherein the primary amine is benzyl amine, allyl amine, beta-cyanoethyl amine, or p-methoxy benzyl amine.

8. (Currently Amended) The method of claim 1, wherein the amine iminoether has the formula

wherein R is deoxyribose, ribose, arabinose, xylose, ribose, lyxose, glucose, galactose, mannose, gulose, idose, talose, altrose, allose, fructose, sorbose, or tagatose.

9. (Original) The method of claim 8, wherein R is deoxyribose, the dialkyl tartarate is L-diethyl tartarate, and pentostatin is synthesized.

10. (Currently Amended) The method of claim 1, wherein the amine iminoether has the formula

wherein R is

wherein X is O, S, NH, or CH<sub>2</sub>; or

wherein  $R_1$ ,  $R_2$ ,  $R_3$ ,  $R_4$ ,  $R_5$ , and  $R_6$  are independently selected from OH, H, methyl, alkyl,  $\text{CH}_2\text{OH}$ , a halogen, a substituted or unsubstituted  $\text{O-R}'$  group, a substituted or unsubstituted  $\text{S-R}'$  group, or a  $\text{NR}'\text{R}''$  group, wherein  $\text{R}'$  and  $\text{R}''$  are independently a straight-chained or substituted alkyl or alkenyl group; or

wherein  $R_7$ ,  $R_8$ ,  $R_9$ ,  $R_{10}$ ,  $R_{11}$ ,  $R_{12}$ ,  $R_{13}$ , and  $R_{14}$  are independently selected from OH, H, methyl, alkyl,  $\text{CH}_2\text{OH}$ , a halogen, a substituted or unsubstituted  $\text{O-R}'''$  group, a substituted or unsubstituted  $\text{S-R}'''$  group, or a  $\text{NR}'''\text{R}''''$  group, wherein  $\text{R}'''$  or  $\text{R}''''$  are independently is a straight-chained or substituted alkyl or alkenyl group.

11. (Original) The method of claim 1, wherein the cyclization is performed with an orthoformate.

12. (Currently Amended) The method of claim 11, wherein the orthoformate has the formula  $\text{HC}(\text{OR}_{18})_3$ , wherein  $\text{R}_{18}$  is a straight-chained or substituted alkyl group.

13. (Original) The method of claim 1, further comprising the step of glycosylating the pentostatin aglycone or the pentostatin aglycone analog.

14. (Original) The method of claim 13, wherein the pentostatin aglycone is glycosylated with deoxyribose to obtain pentostatin.

15. (Canceled)

16. (Currently Amended) The method of ~~claim 15~~ claim 1, wherein Z R<sub>15</sub> is OTBDMS,  $\text{OSiPh}_2\text{C}(\text{CH}_3)_3$ , an acetyl group, dimethoxytrityl a DMT-derivative, or Methylthioethyl amine.

17. (Original) The method of claim 1, wherein the primary amino group comprises a protecting group, and the protecting group is removed after cyclization.

18. (Currently Amended) A method for synthesizing pentostatin or a pentostatin analog, which method comprises the steps of :

converting a L diethyl tartrate to a succinonitrile intermediate, the intermediate having the formula:

wherein Z is  $\text{OR}_{19}$ , wherein  $\text{R}_{19}$  is a protecting group;

reacting the succinonitrile intermediate with an amino sugar intermediate having the formula:

wherein  $R_{20}$  is

wherein X is O, S, NH, or CH<sub>2</sub>, or wherein  $R_{20}$  is

wherein  $R_1$ ,  $R_2$ ,  $R_3$ ,  $R_4$ ,  $R_5$ , and  $R_6$  are independently selected from OH, H, methyl, alkyl, CH<sub>2</sub>OH, or a halogen; or wherein  $R_{20}$  is

wherein R<sub>7</sub>, R<sub>8</sub>, R<sub>9</sub>, R<sub>10</sub>, R<sub>11</sub>, R<sub>12</sub>, R<sub>13</sub>, and R<sub>14</sub> are independently selected from OH, H, methyl, alkyl, CH<sub>2</sub>OH, or a halogen,

to form a substituted imidazole-containing compound, wherein the substituted imidazole-containing compound comprises a moiety having a cyano group;

reducing the cyano group on the substituted imidazole-containing compound to a primary amino group; and

adding an orthoformate to cyclize the primary amino group with a second amino group on the substituted imidazole-containing compound; and

removing the protecting group to obtain pentostatin or the pentostatin analog, wherein the pentostatin analog is selected from:

(a) a pentostatin analog in which the oxygen atom in the sugar moiety is replaced with a sulfur atom, a NH group, or a CH<sub>2</sub> group;

(b) a pentostatin analog in which the sugar moiety is based on arabinose, xylose, ribose, lyxose, glucose, galactose, manose, gulose, idose, talose, altrose, allose, fructose, sorbose or tagatose instead of deoxyribose.

19. (Previously Presented) The method of claim 18, wherein the amino sugar intermediate has the formula

wherein R is deoxyribose, ribose, arabinose, xylose, ribose, lyxose, glucose, galactose, mannose, gulose, idose, talose, altrose, allose, fructose, sorbose, or tagatose.

20. (Original) The method of claim 19, wherein R is deoxyribose.

21. (Original) The method of claim 18 wherein R is

wherein X is S, NH, or CH<sub>2</sub>.

22. (New) The method of claim 1, wherein the imino ether is obtained from a reaction of ammonia or primary amine with a trimethyl orthoester.
